

Contents Scientific Report 2006

Introduction

Organisational chart

Institute for Nuclear Materials Science - NMS
Institute for Advanced Nuclear Systems - ANS
Institute for Environment, Health and Safety - EHS
Institute for Communication, Services and Administration - CSA

Reactor Technology

Introduction

Materials Research

Compatibility of structural materials with liquid lead alloys
Modelling of spatial radiolysis in primary water
Analysis of stacking fault energy in stainless steels
Dynamic fracture toughness on sub-size PCCv specimens
Safety assessment of Atucha-1 RPV material
Irradiation of Materials
LEU based research reactor fuel: post-irradiation studies at SCK•CEN

Reactor Physics & MYRRHA

From MYRRHA DRAFT2 to XT-ADS from a safety perspective
Neutronic design of the XT-ADS core
The GUINEVERE-project
Adapting the MYRRHA concept to meet the XT-ADS objectives
WEBExplr : Windowless Electron Beam Experimental Irradiation
Heavy Liquid metal Robotics Test Rig
Irradiation of candidate materials for PbBi cooled systems: the TWIN-ASTIR experiment

Instrumentation

Optical techniques for in-core measurements
Radiation-hardened micro-electronics for nuclear instrumentation

SERVICES

Reactor Dosimetry
Cf source-detector method for core reload in NPP's

Radioactive waste and Clean-up

Introduction

CHEMICAL TECHNOLOGY & ANALYSES

Materials Chemistry Studies
Role of the SCK•CEN in the production qualification of MOX-fuel
Alternative matrices for sodium bearing waste
Evaluation of a new ICP- AES instrument for Boom Clay waters analysis

WASTE & DISPOSAL

Preliminary on-surface experiments for backfilling a HLW repository: the ESDRED project
Determination of in-depth contamination in concrete using a non-destructive technique
Evaluation of oxidation of Boom clay during construction and operation of a radioactive waste repository
CORALUS – An integrated underground test on the corrosion of high-level radioactive waste in glass
Safety of LILW-SL disposal in Slovenia considering different waste packaging options

Radiation Protection

Introduction

LIFE SCIENCES

Geosphere-Biosphere interface zone: the role of vegetation in water and element exchanges
Gene expression analysis after low dose ionising radiation exposure of the developing organism
Transcriptomic study of a MELISSA strain cultivated in space flight related conditions

Measurement and calculation methods

IDEAS database: a compilation of published internal contamination cases
Synthetic multi-element standards for NAA: a tool for calibration and quality control
Aerial gamma monitor in a helicopter of the Belgian Army for use in emergency situations
Estimation of staff doses in complex radiological examinations using MCNP4B code

Services

Gamma-ray spectrometry
Radiation protection dosimetry and calibrations
Low Radioactivity measurements

BR2

Introduction

ALEPH: An optimal approach to Monte Carlo burn-up
POSEIDON: advanced facility for Silicon NTD

Services

Medical and industrial applications

Nuclear Research and Society

Introduction

Nuclear energy and sustainable development – towards a better support for decision making
Long term governance of radioactive waste – research & guidance of governance methodologies

Education, Training & Communication

Introduction

Reactor Physics Training
Training courses on integrated safety assessment modeling for waste repositories
Research on transdisciplinary aspects of education and training in radiological protection
Training calendar 2006

Services

Education and training possibilities at the Belgian Nuclear Research Centre

Appendix

Members of the Board of SCK•CEN
External Advisory Committees
Doctoral Theses Prepared at SCK•CEN and defended in 2006
Awards and PhD and Postdoctoral Researchers: Selection 2006
Scientific Output and Visitors in 2006
Events in 2006
